

Environmental Guideline

Prantner has expressly set itself the goal of acting in harmony with our environment in all its business activities and thus making a decisive contribution to protecting and preserving it in the local, regional and global environment. Prantner wants to lead the way by manufacturing and operating systems for exhaust air and wastewater treatment as well as soil remediation. Today, Prantner supplies all common processes to reduce the burden on the environment.

With this environmental policy, Prantner emphasizes what is being done to continuously improve its environmental performance and make an even greater contribution to the community.

In order to realize our claim, we have defined the following principles as binding contents of our business policy:

Prantner GmbH ensures that the best possible effective environmental protection is guaranteed in production and that environmental pollution is constantly reduced. Attention is paid to environmentally friendly processes both in the design and construction of the plants. Environmental impacts such as waste, waste water, emissions and noise are avoided or kept as low as possible.

All products manufactured along the value chain, including all materials used, must meet the relevant environmental protection standards for their market segment. This relates in particular to the reduction of energy and water consumption, the reduction of greenhouse gas emissions and the increased use of renewable energies. Prantner considers the protection of the environment and the economical use of natural resources to be a social obligation.

The correct disposal of waste, hazardous substances and chemicals is also ensured by employees responsible for energy and waste management. They also monitor energy consumption and the production of any greenhouse gases. The impact of our activities on the environment is recorded, assessed and translated into targets and measures for improvement. We are committed to continuously working on reducing our environmental impact. Furthermore, all environmentally relevant business processes are integrated into our management system and constantly reviewed with the aim of improvement.

Prantner promotes environmental awareness among its employees in order to jointly protect the environment in all areas of the company and to use raw materials and energy sparingly. Open dialog on environmental issues with our employees and customers, as well as with government agencies and the public, is encouraged through clear and meaningful information on the environmental impact of products, services and operations.

This environmental policy has been reviewed and approved by the company's senior management, who have primary responsibility for implementing these efforts. The environmental guideline is reviewed annually, adapted to situational circumstances, improved and expanded accordingly.
